

# MSC-2 Motorized Slide

Simple, Affordable Welding Torch Position Control

**The MSC-2 motorized cross slide uses vertical or horizontal adjustments to precisely align the torch over the weld joint.**

Stack two slides when both vertical and horizontal adjustment are required. The joystick control allows both slides to move simultaneously or independently.

## Also Available:

### **Weld Oscillator:**

The AP-Automation weld oscillator provides side-to-side motion of the welding gun to produce a programmed weave. It can be used in a variety of mechanical devices: side beams, seamers, manipulators and custom motion devices. **Call for more information.**

### **Heavy-Duty Motorized Slide:**

For applications requiring higher weight capacity and more precise control,, the AP-Automation Motorized Slide Control and Pendant work with our seam tracking cross slides to produce X and Y-axis control with weights from 40 to 450 pounds.

# Specifications

## MSC-2 Motorized Slide & Control

<b>Input power:</b>	115 VAC
<b>Slide load capacity at 12 in. (305 mm) from slide face plate:</b>	75 lb. (34 kg)
<b>Travel speed:</b>	18 IPM (0.46 MPM)
<b>Total Slide Travel:</b>	5 in. (127 mm)
<b>Voltage at motorized slide control:</b>	24 VAC
<b>Net Weight:</b>	32 lb. (14.5 kg)

The MSC-2 comes complete with 10-ft. (3-m) cords for motor, control, and power.
